BEFORE URETEK

AFTER URETEK

URETEK
POOL SOLUTIONS

"I have used URETEK's services for commercial and residential properties. I am very pleased with the results and gladly recommend your company to anyone needing this type of service."

– Mr. Thompson
Property Owner, Texas

"The URETEK injection process was definitely less expensive and less invasive than the alternative."

– Homeowner
Fair Oaks, California

CONTACT INFORMATION

CONCRETE LIFTING AND SOIL STABILIZATION SOLUTIONS FOR SINKING POOLS

THE PROBLEM //

POOL SETTLEMENT AND SOIL EROSION

Main Causes:

- Poor Soil Compaction
- Soil Erosion
- Leaky Pool Equipment

SYMPTOMS

INTERIOR CRACKS

UNLEVEL WATER

DECK SETTLEMENT

TRIP HAZARDS

THE SOLUTION //

URETEK

CONCRETE LIFTING AND SOIL STABILIZATION FOR SINKING POOLS AND NATATORIUMS

- Residential Pools
- Aquatic Centers
- Community Pools

BENEFITS

History of Success

As the first to develop the technology for non-disruptive ground engineering by injecting expanding polymer, collectively URETEK has successfully completed over 100,000 projects spanning three decades.

Long-Lasting Solution

URETEK's solutions are long term and dependable. The URETEK Polymer is guaranteed for ten years against any loss of dimensional stability or deterioration.

Environmentally Friendly

URETEK polymer is guaranteed to meet or exceed environmental requirements, is environmentally neutral, and does not contribute to soil or water contamination.

Fast Installation

The URETEK Process is done quickly and efficiently. Time requirements are reduced to hours, unlike alternative repair techniques which can take days or weeks to complete.

Hydro-Insensitive

The URETEK Material displaces trapped water and is not compromised by wet conditions during or after installation, making the material excellent for sealing cracks or joints.

Cost-Efficient

URETEK is the most cost effective solution, downtime is minimal and cosmetic damages that other methods can cause are reduced dramatically.

WHAT WE DO

Concrete settlement happens to many structures at some point during their life span. Swimming pools are no exception. URETEK's proven technology utilizes a high-density expanding polymer injection process to lift, realign, and stabilize un-even pools and natatoriums... Leaving you worry free, so you can enjoy your pool again.

Our URETEK polymer is injected under the pool through small 5/8" holes (penny-sized); as the material expands, weak soil is compacted and the load bearing capacity of the soil is increased. Once the soil is compacted, the URETEK material gently and precisely lifts the structure back to it's proper level, resulting in a restored and stabilized pool that's ready for swimmers.
